

Geared servo motors

G-motion servo MC

Our commitment to you

If you are looking for effective and easy solutions for the implementation of your machine and drive concepts or want to optimise existing concepts and cut your costs, Lenze is your ideal partner.

We have a 60 years experience at the cutting edge of drive and automation technology.

Drive and automation technology set in motion by Lenze – for example in logistics centres, in the textile and printing industry, in the automotive industry or as the driving force behind robots.

Lenze | about us

We can offer you automation solutions, including control, visualisation and drive technology, from one source. Our drive systems will improve the performance of your machines. From project planning to commissioning, we have the know-how. Our international sales and service network can provide you with expert help and advice at any time.

Cut your process costs and increase your ability to compete. Let us analyse your drive technology tasks and support you with made-to-measure solutions.

We can take an integrated approach to projects thanks to the scalability of our products and the scope of the overall portfolio. We can get the best from your machines and systems.

At your side all over the world – with thorough and professional support from our motivated team.

System overview | G-motion servo

Further catalogues

This catalogue describes geared servo motors in the G-motion Servo MC series. Further components in the above system overview may be found in the following catalogues:

Components

9400 Servo Drives
 ECS servo system
 9300 servo inverter
 MCS/MCA servo motors
 and accessories

Servo motors product key

2) Not possible with blowers

General information

Product information

Innovative geared motors combined with powerful drive electronics to meet the highest standards in terms of dynamics, positioning accuracy and robustness: the G-motion servo.

Featuring a wide variety of geared motors in the following variants:

- ▶ Helical gearboxes
- ▶ Shaft-mounted helical gearboxes
- ▶ Bevel gearboxes
- ▶ Helical-bevel gearboxes
- ▶ Helical-worm gearboxes
- ▶ Servo-planetary gearboxes

Lenze offers high levels of functionality while complying with many industrial standards. Closely stepped output speeds allow you to make the perfect choice for your drive task.

Lenze geared servo motors are available in a power range from 0.25...20.3 kW.

Together with the Lenze servo controllers, these geared motors offer a perfect drive combination with high dynamic performance.

- ▶ Power range of the synchronous servo motors: 0.25...10 kW
- ▶ Power range of the asynchronous servo motors: 0.8...20.3 kW

Designations used in the catalogue:

□	wildcard	k_{n1}	Speed correction factor for ambient temperature
α	Angle of action of radial force	k_{n2}	Speed correction factor for mounting position
φ	Ratio step	k_{n3}	Speed correction factor for duty time/average speed
η [%]	Mechanical efficiency	k_m	Speed correction factor for average speed
η_A [%]	Mechanical start-up efficiency of gearbox	KE_{LL} [V/1000 min ⁻¹]	Voltage constant (phase-to-phase)
$\eta_{c=1}$ [%]	Mechanical efficiency of gearbox with gearbox loading $c = 1$	Kt_0 [Nm/A]	Torque constant at standstill
η_G [%]	Mechanical efficiency of gearbox	$L_{1\sigma}$ [mH]	Stator leakage inductance
ϑ [°C]	Temperature	$L_{2\sigma}$ [mH]	Rotor leakage inductance (referred to stator)
AC	Alternating current/voltage	L_h [mH]	Mutual inductance
BD [h]	Operating time	L_{str} [mH]	Winding inductance per phase
c	Load capacity of geared motors	m [kg]	Mass
DC	Direct current/voltage	M_B [Nm]	Brake holding torque
ED	Duty time	M_{eff} [Nm]	Effective torque at output
f_α	Effective direction factor at output shaft	M_L [Nm]	Load torque
f_N [Hz]	Rated frequency	$M_{L,max}$ [Nm]	Maximum load torque
f_w	Additional load factor at output shaft	$M_{L,z}$ [Nm]	Stationary load torque per time segment
f_z	Additional radial force factor of transmission element	M_{max} [Nm]	Maximum motor torque
Fa [N]	Applied axial force	M_N [Nm]	Rated motor torque
Fa_{Tab} [N]	Table value of axial force	$M_{S,z}$ [Nm]	Acceleration torque
Fa_{zul} [N]	Permissible axial force	$M_{s,eff}$ [Nm]	Effective torque
Fr [N]	Applied radial force	M_z [Nm]	Output torque per time segment
Fr_{Tab} [N]	Table value of radial force	$M_{p,max}$ [Nm]	Maximum torque of profile
Fr_{zul} [N]	Permissible radial force	M_0 [Nm]	Continuous standstill torque
H [m]	Site altitude above sea level	M_1 [Nm]	Input torque
i	Ratio	M_2 [Nm]	Output torque
i_g	Precise ratio	$M_{2,max}$ [Nm]	Maximum output torque
I_B [A]	Rated brake current	$M_{2,GN}$ [Nm]	Rated gearbox torque at the output at $c=1$ and $n_1 = 1400 \text{ min}^{-1}$
I_{max} [A]	Maximum current	N	Start-ups
I_M [A]	Rated motor current	$n_{L,z}$ [min ⁻¹]	Load speed
I_0 [A]	Continuous standstill current	$\Delta n_{L,z}$ [min ⁻¹]	Load speed difference per time segment
J_B [kgcm ²]	Moment of inertia of the brake	n_{max} [min ⁻¹]	Maximum speed
J_G [kgcm ²]	Moment of inertia of the gearbox reduced to the motor shaft	n_N [min ⁻¹]	Rated speed
J_L [kgcm ²]	Moment of inertia of load at output shaft	n_m [min ⁻¹]	Mean speed
J_M [kgcm ²]	Moment of inertia of the motor	n_1 [min ⁻¹]	Input speed
k	Application factor (following DIN 3990)	$n_{1,max}$ [min ⁻¹]	Maximum input speed
k_l	Intensity of gearbox load capacity	n_2 [min ⁻¹]	Output speed
k_j	Load-matching factor	$n_{2,Eck}$ [min ⁻¹]	Output speed at rated motor speed
k_L	Overload factor		

General information

List of abbreviations

Designations used in the catalogue:

$n_{2,th}$ [min ⁻¹]	Thermal limit speed at output
P_N [kW]	Rated power
R_1 [Ω]	Winding resistance per phase
R_2 [Ω]	Rotor resistance (referred to stator)
R_{UV} [Ω]	Winding resistance between 2 terminals
T [s]	Load cycle duration
t_L [%]	Runtime at maximum torque
T_U [°C]	Ambient operating temperature
Δt_z [s]	Individual time segments
U_B [V]	Rated brake voltage
U_N [V]	Rated motor voltage
z_g	Multiplied numbers of teeth (driven gears)
z_t	Multiplied numbers of teeth (driving gears)

IM	International Mounting Code
IP	International Protection Code
CE	Communauté Européene
CSA	Canadian Standards Association
DIN	Deutsches Institut für Normung
EMV	Electromagnetic compatibility
EN	European standard
IEC	International Electrotechnical Commission
NEMA	National Electrical Manufacturers Association
UL	Underwriters Laboratory
UR	Underwriters Laboratory recognized component
VDE	Verband deutscher Elektrotechniker

General information about the data provided in this catalogue

Power ratings, torques and speeds

The power ratings, torques and speeds specified in the catalogue are rounded values and apply to

- ▶ Daily running time of 8h, 240 days a year
- ▶ Ambient temperature up to 30°C
- ▶ Operating time 5.5 hrs a day
- ▶ Average speed utilisation in relation to the load speed of the geared motor: 80%
- ▶ Site altitude up to 1000 m above sea level.
- ▶ Mounting positions and designs listed in the catalogue (selection table relates to mounting position A).
- ▶ Standard lubricant.

Under different operating conditions, the values obtained may vary from those listed here.

In the case of extreme operating conditions, please contact your Lenze sales office.

Load capacity c of the gearboxes

Characteristic value for the load capacity of Lenze geared motors.

- ▶ c is the ratio of the permissible rated torque of the gearbox to the rated torque supplied by the drive component (e.g. the internal Lenze motor).
- ▶ c must always be greater than the application factor k determined for the application.

Application factor k (in accordance with DIN 3990)

Takes into account the influence of temporally variable loads which are actually present during the anticipated runtime of geared motors.

k depends on

- ▶ The type of load
- ▶ The intensity of the load
- ▶ Temporary factors

General information

Notes on ordering

We aim to process your order quickly and accurately. Therefore, please ensure that your order details are complete.

In order to receive the correct products in good time, please provide the following information:

- ▶ Your address and order data
- ▶ Our product keys for the individual products in this catalogue
- ▶ Your delivery details, such as delivery date and delivery address

Ordering procedure

Use the ordering details checklist to ensure that you provide all the necessary information for each product.

You can find the ordering details checklist, product key, basic designs, options, mounting position and system block positions in the chapter General information - Product key.

A list of Lenze sales offices can be found at the end of this catalogue.

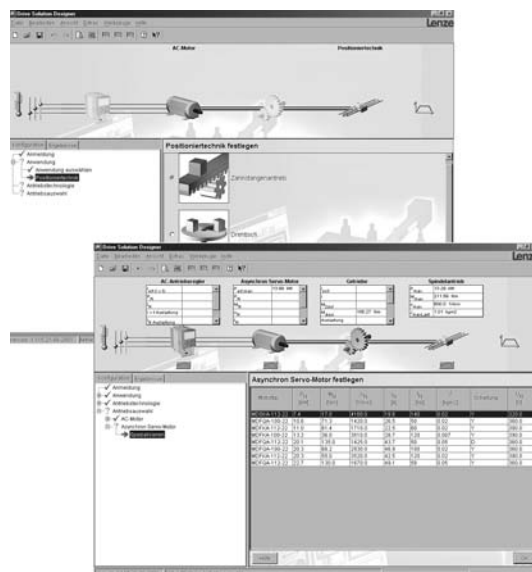

Lenze wants to assist you in optimising your project planning processes. Drive selection and dimensioning is the foundation of all plant planning. This project planning manual for Lenze geared servo motors will guide you from the initial torque and speed input variables right through to a functional and efficient drive train. Your local Lenze sales office will assist you in drive dimensioning. Please consult us.

From the rough outline to the finished drive solution

After gathering information about the mechanical parameters and the motion profile, sales staff use the "Drive Solution Designer" to complete drive dimensioning and optimisation in next to no time.

The original application data and the results from the Drive Solution Designer are summarised in a document in a structured manner. The graphical analysis provides clear, comprehensive information about the drive load and configuration. The hardware required by the solution is documented; this simplifies the ordering process and means that the complete solution can be supplied quickly.

Drive dimensioning

Aim of dimensioning

This section describes the dimensioning of drives with geared servo motors.

The aim of dimensioning

is to select the right geared servo motor for a given application, ensuring that the requirements for the specific application are reliably met. The operating conditions concerned are taken into consideration in this process:

- ▶ Ambient temperature
- ▶ Mounting position
- ▶ Load cycle

For the sake of simplicity, the dimensioning given is for standard operating modes and for general load cycles:

- ▶ Constant load, operating mode **S1** *
- ▶ Short-time operation **S2**
- ▶ Intermittent operation **S3**
- ▶ Continuous operation **S6** *
- ▶ Load profiles for an **application-specific load cycle**

* For maximum life expectancy, Lenze recommends the use of motors with a low rated speed for operating modes S1 and S6.

Dimensioning involves 3 elements:

- ▶ **Satisfying the drive function** - Can the required speeds, torques, accelerations be achieved with the chosen drive?
- ▶ **Mechanical strength** - Can the drive withstand the torques and forces occurring?
- ▶ **Thermal dimensioning** - Does the operating temperature remain within the permissible limits, preventing premature ageing?

Drive function

The process values required are used to select a drive for which all working points lie within the speed/torque characteristic curves. This results in the selection of a gearbox of the correct ratio with a motor of the correct speed and an inverter with the correct maximum current. Other limits (maximum speed, site altitude) are shown in tables.

Mechanical strength

The forces and torques arising together with the application factor and the gearbox torque are used to select a drive with adequate mechanical strength (endurance strength of the gearing for periodically occurring torques and endurance limit for sporadically occurring torques).

Thermal dimensioning

For the **inverter**, thermal dimensioning uses the continuous inverter current or the continuous torque achievable by the motor/inverter combination.

For the **motor**, thermal dimensioning uses the average speed and the effective torque.

For the **gearbox**, thermal dimensioning uses the average speed and the continuous torque of the motor/gearbox combination. The thermal limit speed specified is intended as a recommendation. The average speed of the drive must not exceed the specified values.

Dimensioning in three steps

The dimensioning of geared servo motors can be divided into three steps, which are listed separately for each of the operating modes referred to above (S1, S2, S3, S6, profile):

Determination of input variables, including:

- ▶ Load torque, load speed, acceleration (for speed profiles, several working points with times)
- ▶ Maximum torque
- ▶ Mounting position
- ▶ Power loading
- ▶ Method of torque transmission

Calculation of values required for the process, including:

- ▶ Overall torques from load torque and acceleration
- ▶ Maximum load torque
- ▶ Effective torque
- ▶ Average speed
- ▶ Maximum speed

Selection of the geared servo motor and checking the selection for fulfilment of required values, including:

- ▶ Calculation of overall torque on the motor end (effective torque, maximum torque)
- ▶ Thermal checking of the motor by reference to effective torque and average speed
- ▶ Thermal checking of the gearbox by reference to average speed and effective torque
- ▶ Checking of maximum gearbox torque by reference to periodically occurring torques and sporadically occurring maximum torques
- ▶ Checking of the motor/inverter combination by reference to maximum torques
- ▶ Checking of load adjustment
- ▶ Checking of axial and radial force on the gearbox

To obtain a **reliable drive**, **particular attention** must be given to selecting and checking it. The various elements involved in dimensioning and checking are described in more detail below. Special emphasis is placed on **compliance with the limits of the geared servo motor drive** (functional limits, thermal limits, mechanical limits).

Dimensioning of geared servo motors for kinematic profiles, operating modes S1, S2, S3, S6 and speed profiles

Suitable for simple linear speed profiles, not for S-curves or similar. For complex or full-load dimensioning, please contact your local Lenze subsidiary.

Standard operating conditions:

- ▶ Single shift operation, 8 hours a day, 240 days a year
- ▶ Ambient temperature up to 30 °C
- ▶ Operating time 5.5 hours a day
- ▶ Average speed utilisation in relation to the load speed of the geared motor 80 %
- ▶ Mounting position A
- ▶ Site altitude up to 1000 m above sea level

Included

- ▶ Rated mains voltage AC 400 V, 3-phase
- ▶ Ambient temperature
- ▶ Site altitude
- ▶ Dimensioning with 9400, 9300 and ECS speed-torque characteristic curves for mains voltages of 400 V, 3-phase
- ▶ Process requirement
- ▶ Preselection of motor
- ▶ Load capacity of gearbox
- ▶ Intended transmission ratio
- ▶ Maximum permissible gearbox input speed
- ▶ Axial and radial load on gearbox output shaft
- ▶ Overall reduced moment of inertia
- ▶ Load adjustment to moments of inertia

Not included

- ▶ Correct consideration of efficiency in motor mode/generator mode
- ▶ Accessories such as brake choppers, brake resistors, feedback systems, mains filters
- ▶ Current derating on 9300 servo at low speeds
- ▶ Special ambient conditions such as special power system characteristics, high temperatures/site altitudes, contamination, outdoor use, explosion protection
- ▶ Maximum standstill current
- ▶ Setting the controller inhibit to reduce the heat load on the drive

The operating mode is important when selecting a motor. For example, the temperature rise on a motor subject to short-term load will be lower than that on a motor subject to long-term load. EN 60034 defines operating modes S1 to S8.

Continuous operation S1

The operating time at rated power is long enough for the machine to reach steady-state temperature. The motor operates continuously at rated power.

Short-time operation S2

In comparison with the subsequent pause, the operating time is too short for the machine to reach steady-state temperature. During the subsequent lengthy pause, the motor cools down to the initial temperature.

Intermittent operation S3, S4, S5

Cycles of the same type combine to form a sequence. The cycle time is usually 10 minutes.

- ▶ S3: The starting current is not significant for the temperature rise in the motor
- ▶ S4: The starting current contributes to the temperature rise in the motor
- ▶ S5: Starting current and braking current contribute to the temperature rise in the motor

Continuous operation with intermittent loading S6

The motor continues to be ventilated during the no-load phases, enabling it to cool down.

Uninterrupted operation with acceleration and braking S7

The motor runs almost without break.

Uninterrupted operation S8 with pole changing

The machine runs constantly under load but with frequent speed variation.

Drive dimensioning

Operating mode S1

Dimensioning of geared servo motors for operating mode S1 (EN 60034)

The drive is constantly loaded in operating mode S1, there may be a change of direction of rotation or an alternating load.
Precondition: constant power loss, neglect of start-up process (constant temperature rise)

Required input variables			
Operating time/day	BD =		[h]
Average speed utilisation of the geared motor related to the speed under load n_L			[%]
Ambient temperature	$T_u =$		[°C]
Site altitude above sea level	H =		[m]

Drive dimensioning

GSS efficiencies

The start-up efficiency η_A of a helical-worm gearbox is lower than its operative efficiency at rated speed.

The start-up efficiency η_A must therefore always be taken into consideration when starting under load.

		Output speeds n_2 [min ⁻¹]														
		I	1	5	10	16	25	32	40	63	100	160	250	400	630	800
		η_A	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$	$\eta_{c=1}$

General data

Gearbox type	GST	GFL	GKR	GKS	GSS
Housing					
Design	Cuboid				
Material	Aluminium/grey cast iron				
Solid shaft					
Design	With keyway in accordance with DIN 6885 Centring hole in accordance with DIN 332, Part 2				
Tolerance	k6 ($d \leq 50$ mm) m6 ($d > 50$ mm)				
Material	Tempering steel C45 or 42CrMo4				
Hollow shaft					
Design	-	Hollow shaft (H): with keyway Hollow shaft with shrink disc (S): smooth			
Tolerance	-	Bore measured in accordance with ISO H7 with plug gauge			
Material	-	Tempering steel C45			
Geared parts					
Design	Optimised tooth flanks and profile geometry; ground tooth flanks				
Material	Case-hardened steel			Case-hardened steel, worm gear bronze	
Shaft-hub joint					
Design	1st stage/pre-stage: friction-type connection (= 2nd, 3rd or 4th stage): friction-type or positive-fit				
Shaft sealing rings					
Design	With dust lip				
Material	NB/FP (Viton)				
Bearing					
Design	Ball bearings/tapered-roller bearings depending on frame size and design				
Lubricants					
Design	In accordance with DIN 51502				
Fill volumes	Depending on the mounting position (see Operating Instructions)				
Mechanical efficiency					
At rated torque	$0.95 \leq \eta \leq 0.98$	$0.95 \leq \eta \leq 0.96$	$0.93 \leq \eta \leq 0.95$	$0.79 \leq \eta \leq 0.92$ ▶ depending on ratio ▶ when $n_1 = 1400 \text{ min}^{-1}$ ▶ gearbox at operating temperature and gearing run in	
Noises	Does not exceed the emission values specified in VDI Guideline 2159				
Enclosure					
Design	IP55 and IP65				

General data

Gearbox type	GPA
Housing	
Design	Cuboid
Material	Cast iron with nodular graphite
Solid shaft	
Design	Smooth without keyway Centring hole in accordance with DIN 332, Part 2
Tolerance	k6
Material	Tempering steel C45
Geared parts	
Design	Spur toothing, optimised tooth flanks and profile geometry
Planet pinions + sun wheel	Design: case-hardened and tooth flanks ground Material: case-hardened steel 17 Cr Ni Mo 6
Internal gearing	Design: shaped or broached Material: ductile cast iron EN-GJS-700-2
Ratios	Design: all ratios are mathematically exact
Shaft-hub joint	
	Positive-fit with special splined shaft profile
Shaft sealing rings	
Design	With dust lip
Material	FP (Viton)
Bearing	
Design	Ball bearings/tapered-roller bearings/needle bearings depending on frame size
Lubricants	
Design	In accordance with DIN 51502
Fill volumes	Depending on the mounting position (see Operating Instructions)
Mechanical efficiency	
At rated torque	$0.95 \leq \eta \leq 0.98$
Noises	
	Does not exceed the emission values specified in VDI Guideline 2159
Enclosure	
Design	IP54 and IP65

Ventilation

Gearboxes without ventilation

Ventilation is not required for the following gearboxes:

GST03/04

GFL04

GPA00...05

GKR03...05

GKS04

GSS04

Gearboxes that can be fitted with optional ventilation

If you are using these gearboxes, in most cases you will not need to provide special means of ventilation. In borderline cases, e.g. at input speeds $> 2000 \text{ min}^{-1}$, we recommend the use of breather elements, which can be purchased separately.

GST05

GFL05

GKS05

Gearboxes with ventilation

The following gearboxes are supplied with breather elements as standard:

GST06...14

GFL06...14

GKR06

GKS06...14

GSS05 - 07

Special precautions for mounting position C (motor on top)

For gearbox sizes G□□09...14 in this mounting position, we recommend the use of an oil compensation reservoir. This can be purchased separately. Depending on the gearbox type, you can find illustrations and special precautions under ventilation G□□ [⊗].

It is not required at high ratios or low input speeds. Please contact Lenze in such cases.

Lubricants

Lenze gearboxes and geared motors are ready for operation on delivery and are filled with lubricants that are specific to both the drive and the design. The mounting position and design specified in the order are decisive factors in choosing the volume of lubricant.

The lubricants listed in the lubricant table are approved for use in Lenze drives.

Lubricant table

Permissible radial force

$$Fr_{zul} = \min(f_w \times f_{\alpha} \times Fr_{Tab}; f_w \times Fr_{max})$$

At Fr and $Fa \neq 0$ please contact your Lenze sales office.

Permissible axial force

$$Fa_{zul} = Fa_{Tab} \text{ at } Fr = 0$$

Effective direction factor f_{α} at output shaft

- Direction of rotation R
- - - Direction of rotation L

Additional load factor f_w at output shaft

- Solid shaft (V□R)
- - - Solid shaft with flange (V□K)
- · - Hollow shaft (H□□)

- ▶ Ensure that the strength of the shaft material is adequate in shrink disc designs.
When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction.
When using material that is considerably weaker, please consult us. Medium surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

Possible combinations with shrink disc in position 1 (drive end)

Permissible radial force

$$Fr_{zul} = \min(f_w \times f_{\alpha} \times Fr_{Tab}; f_w \times Fr_{max})$$

Permissible axial force

$$Fa_{zul} = Fa_{Tab} \text{ at } Fr = 0$$

At Fr and $Fa \neq 0$ please contact your Lenze sales office.

Effective direction factor f_{α} at output shaft

Additional load factor f_w at output shaft

— Direction of rotation R
 - - - Direction of rotation L

— Solid shaft (V□□)
 - - - Hollow shaft (H□□)

- ▶ Ensure that the strength of the shaft material is adequate in shrink disc designs.
When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. Medium surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

Permissible radial force

$$Fr_{zul} = \min(f_w \times f_{\alpha} \times Fr_{Tab}; f_w \times Fr_{max})$$

Permissible axial force

$$Fa_{zul} = Fa_{Tab} \text{ at } Fr = 0$$

At Fr and $Fa \neq 0$ please contact your Lenze sales office.

Effective direction factor f_{α} at output shaft

- Direction of rotation R
- - - Direction of rotation L

Additional load factor f_w at output shaft

- Solid shaft (V□R)
- - - Solid shaft with flange (V□K)
- · - Hollow shaft (H□□)

Solid shaft without flange (V□R)

- ▶ Ensure that the strength of the shaft material is adequate in shrink disc designs. When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. Medium surface roughness Rz must not exceed 15 µm (turning operation is sufficient).

- ▶ Ensure that the strength of the shaft material is adequate in shrink disc designs.
When using typical steels (e.g. C45, 42CrMo4), the torques listed in the selection tables can be used without restriction. When using material that is considerably weaker, please consult us. Medium surface roughness R_z must not exceed $15 \mu\text{m}$ (turning operation is sufficient).

* Countries connected to the free expert helpline 008000 24 hours (008000 24 46877)

It's good to know | why we are there for you

"Our customers come first. Customer satisfaction is what motivates us. By thinking in terms of how we can add value for our customers we can increase productivity through reliability."

"The world is our marketplace. We develop and manufacture internationally. Wherever you are in the world, we are nearby."

"We will provide you with exactly what you need – perfectly co-ordinated products and solutions with the right functions for your machines and installations. That is what we mean by 'quality'."

"Take advantage of our wealth of expertise. For more than 50 years we have been gathering experience in various fields and implementing it consistently and rigorously in our products, motion functions and preprepared solutions for industry."

"We identify with your targets and strive towards a long-term partnership which benefits both sides. Our competent support and consultation process means that we can provide you with tailor-made solutions. We are there for you and can offer assistance in all of the key processes."

You can rely on our service. Expert advice is available 24 hours a day, 365 days a year, in more than 30 countries via our international helpline: 008000 24 Hours (008000 2446877).
