

Motor Controllers

AC Semiconductor Motor Controller

Type RSHR 3-Phase

- Soft starting and stopping of 3-phase squirrel cage motors
- Control of all 3 phases
- In Line or In Delta motor connection
- Low inrush and reduced vibration during starting
- External power supply option for a wide operational voltage range
- Rated operational voltage: up to 600 VAC, 50/60 Hz
- Rated operational current: up to 32A AC-53a
- LED status indicators
- Motor PTC protection
- Device over-temperature protection
- DIN rail mounting*

* Accessory for panel mounting available

Product Description

Compact, digital AC semiconductor motor controller. When used on a typical 400VAC supply, this controller can soft-start and soft-stop 3-phase motors up to 22kW (30HP) when connected In Delta and up to 15kW (20HP) when connected In Line. All 3-phases are switched. Starting and stopping time as well as initial torque can be

independently adjusted by potentiometers on the fascia. A version adapted for starting Scroll Compressors is also available.

This device does not include internal bypass relays but provides a relay contact to help energise an external bypass contactor.

Stripping length	6 mm

Standards

Approvals	UL, cUL (E172877) pending
Markings	CE
Norms	LVD; EN 60947-4-2 EMCD; EN 60947-4-2

Environmental Specifications

Operating temperature	-20°C to +60°C (-4°F to +140°F)
Storage temperature	-50°C to +85°C (-58°F to +185°F)
Relative humidity	<95% non-condensing @40°C
Pollution Degree	3
Degree of Protection	IP20 (EN/IEC 60529)
Installation Category	III
Installation Altitude	Above 1000m derate linearly by 1% of unit FLC per 100m to a maximum altitude of 2000m

External Supply Specifications*

External supply voltage	24VDC/AC +/-20%
Rated AC frequency	50/60Hz +/-10%
Dielectric strength	
Dielectric withstand voltage	
Supply (A3, A4) to output	2.5 kV
Supply (A3, A4) to input	4 kV
Supply (A3, A4) to heatsink	4 kV

* Applies to RSHRM models only

Supply Specification

Dielectric strength	
Dielectric withstand voltage	
Supply to input	4 kVrms
Supply to heatsink	4 kVrms
Rated impulse withstand voltage	6 kV (1.2/50µs)

Input Specifications

Rated control input voltage Uc, A1:A2	
RSHR....CV3.	24 - 550VAC/DC
RSHR60..DV3.	24-600 +10% VAC/DC
Max. control input current	3.0 mA
Rated AC frequency	50/60Hz +/-10%
Response time input to output	350 ms
Dielectric strength	
Dielectric withstand voltage	
Input to heatsink	4 kVrms
Rated impulse withstand voltage	6 kV (1.2/50µs)

General Specifications

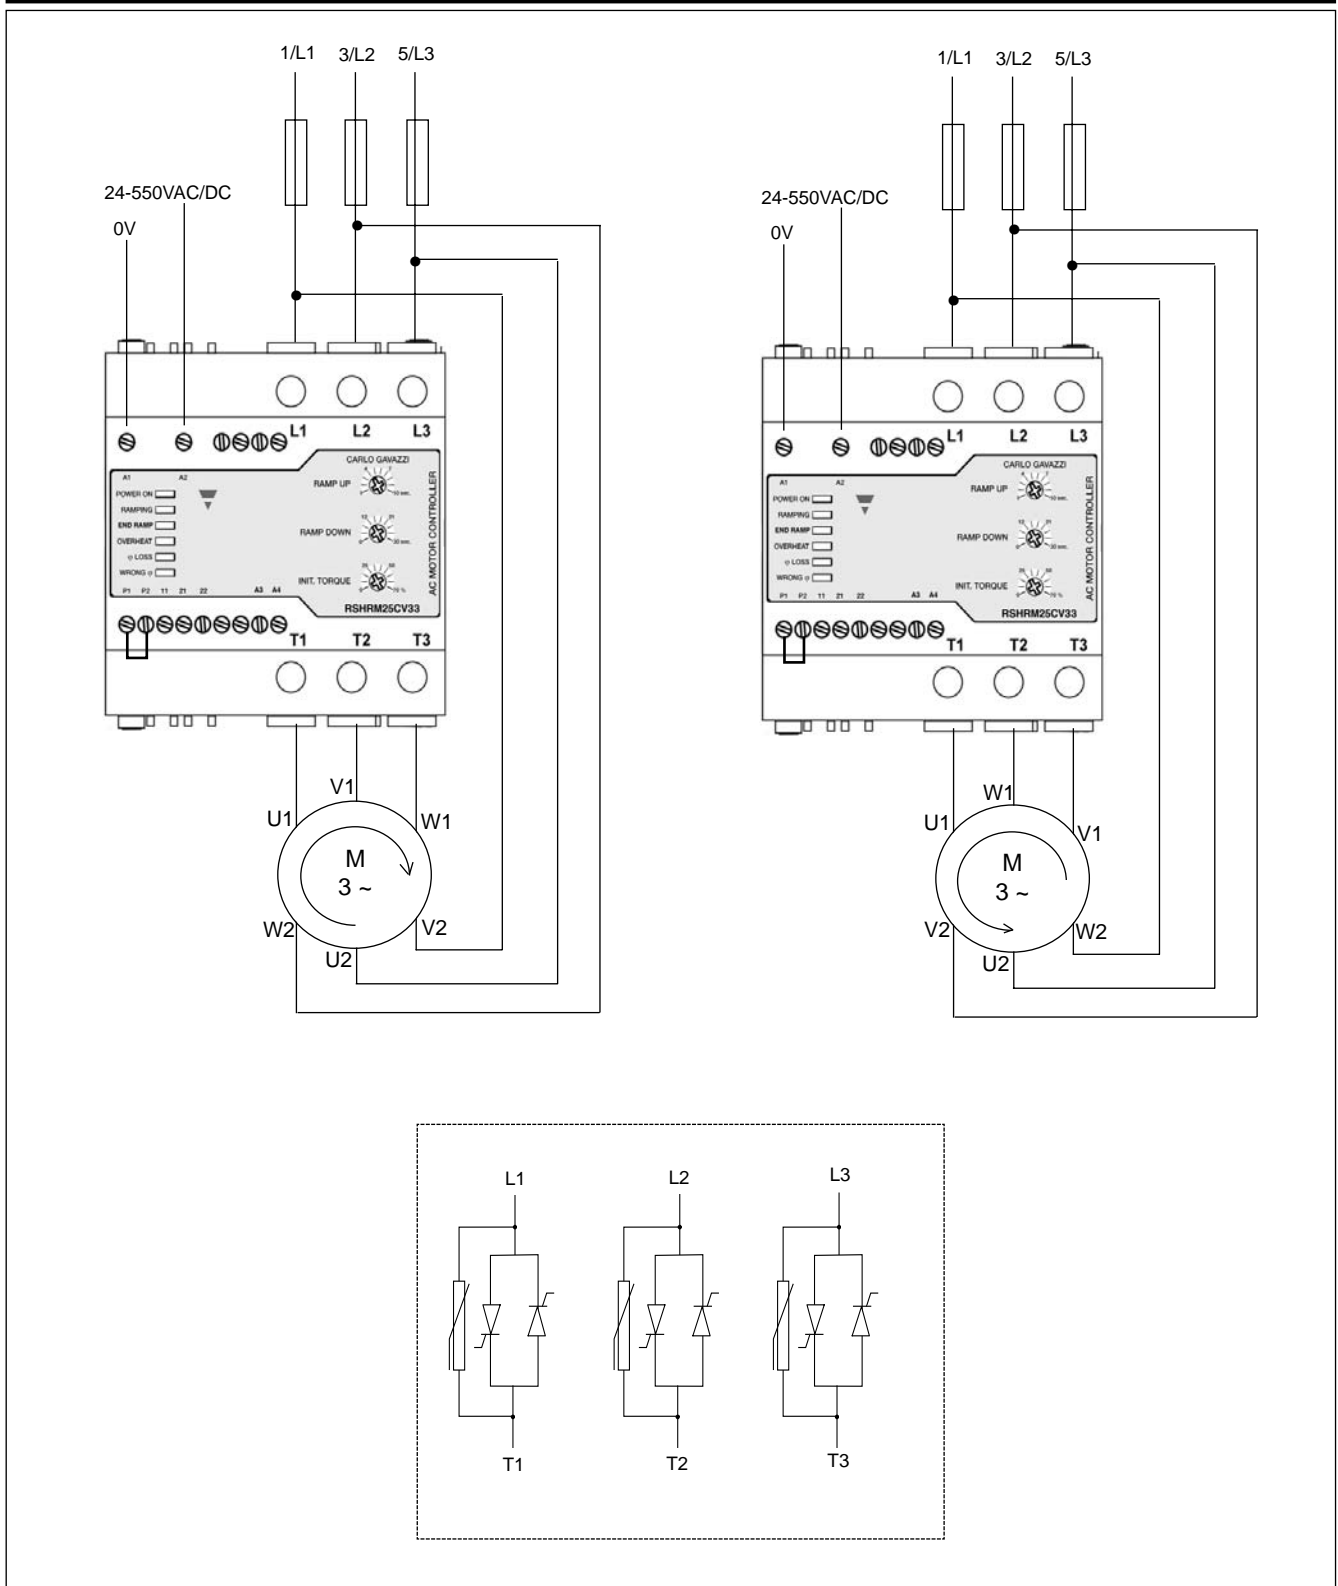

Ramp up time	1...10s	Motor PTC alarm input P1, P2	Acc. to DIN 44081 and DIN 44082-1
RSHR...V38	0...1s	Form designation	Form 1
Ramp down time	0...30s	Auxiliary relays:	
RSHR...V38	0...1s	End of ramp relay activation	Normally open (21,22)
Initial torque	0...70%	Over-temperature, phase sequence, phase loss alarm	Normally closed (11, 22)
Status indicator LEDs		Auxiliary relay contact capacity	3 A, 250 VAC 3 A, 30 VDC
Power supply ON	LED, green (continuous)	Weight	approx. 1.3kg
Ramping	LED, yellow (intermittent)	Housing material	conforms to UL 94 V0
End of ramp	LED, yellow (continuous)	Mounting	DIN Rail 35 mm
Ramp/ End* ¹ (RSHR...V38)	LED, yellow (intermittent/continuous)		
Delay* ¹ (RSHR...V38)	LED, yellow (continuous)		
Over-temperature alarm			
Device alarm	LED, red (intermittent)		
Motor PTC alarm	LED, red (continuous)		
Wrong phase sequence* ²	LED, red (intermittent)		
Phase loss			
Phase loss alarm* ^{2, 3}	LED, red (blinking at 2Hz)		

*¹ In the RSHR...V38 versions, the same LED is used to indicate both Ramping and End Ramp status. When the RSHR is in ramping mode, the LED will be intermittently ON. Once the Ramping is completed, the same LED will go fully ON indicating End of Ramp. The delay feature available in the RSHR...V38 does not allow the compressor to start prior to 5 mins. from last ramp down. During this waiting period the Delay LED will be continuously ON.

*² Detection of these alarm conditions is made during power-up of the device.

*³ Phase loss alarm applies on loss of L3 only. For RSHRM, phase loss alarm applies on loss of any of the 3 phases (L1, L2 or L3). During operation, the RSHRM will issue an alarm and performs shut down in case ALL 3 phases are lost. This will prevent a DOL start when the supply is restored, in case the 24V external supply remains present.

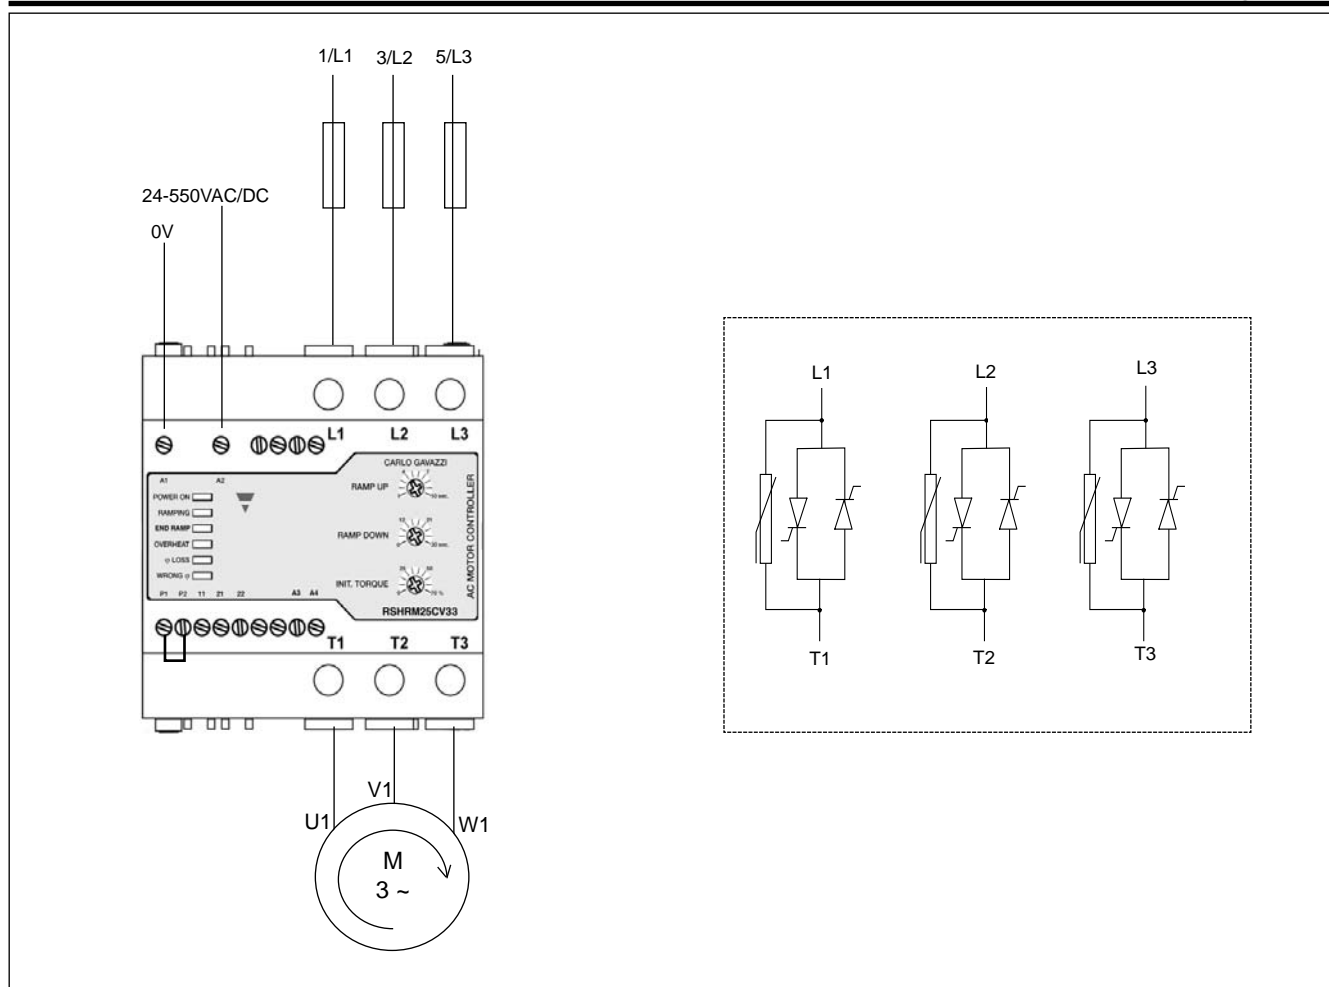

Connection Diagram - In Delta

NOTES:

1. A3, A4 24VAC/DC used only for RSHRM models
2. A1, A2 24-660VAC/DC for RSHR60..DV33 models
3. In order to have the motor rotating in an another direction it is necessary to swap 2 motor windings as indicated.

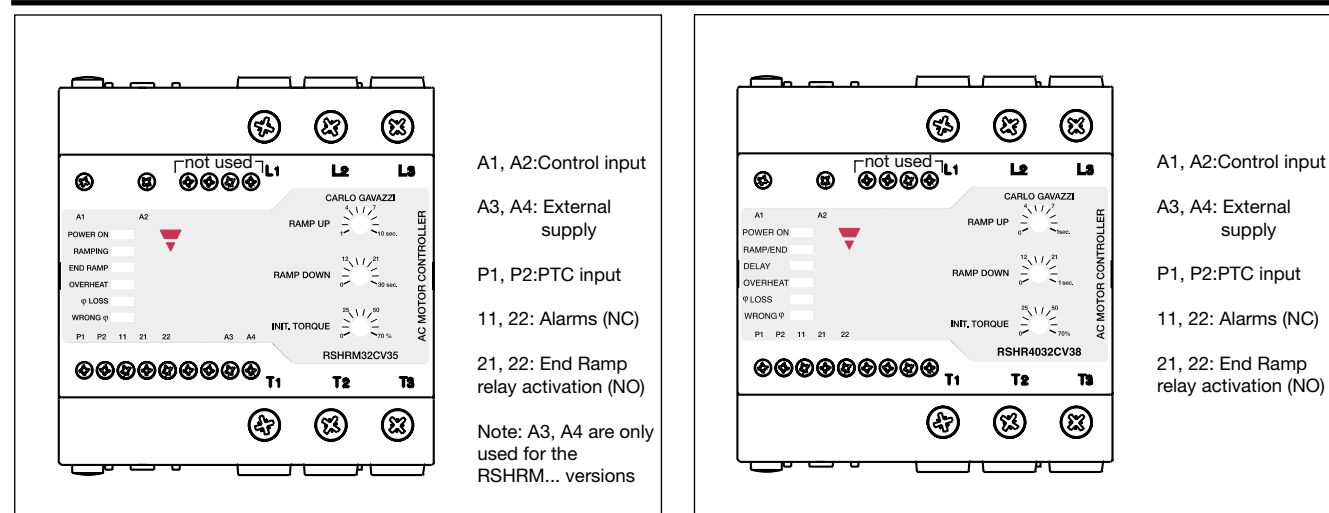

Connection Diagram - In Line

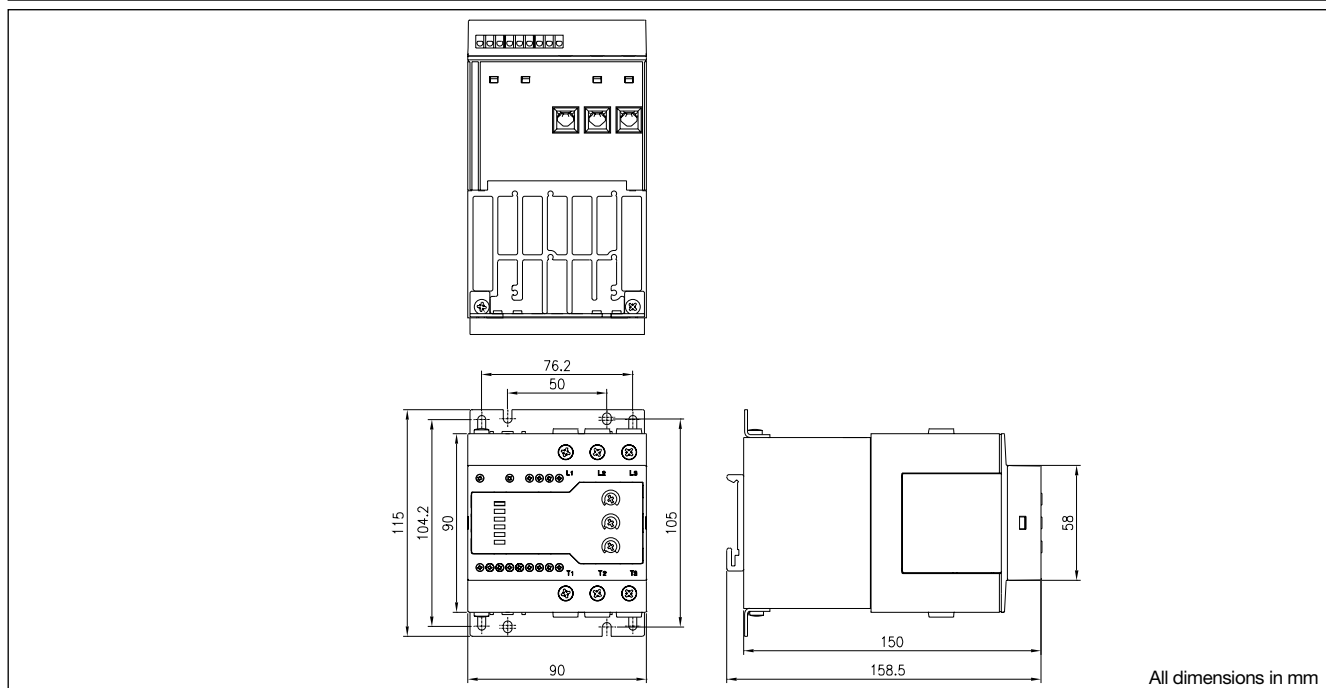

NOTES:

1. A3, A4 24VAC/DC used only for RSHRM models
2. A1, A2 24-660VAC/DC for RSHR60...DV32 models

Semiconductor fuse	Ferraz Shawmut model, A70 QS60-4	Ferraz Shawmut model, A70 QS100-4

Wiring Diagram

IEC

The RSHR 3-Phase does not include internal bypass relays. As such semiconductors can be damaged by short-circuit currents during Ramp up, Ramp Down and Running. Please note that the motor controller does not isolate the motor from the mains.

Figure 1: Protection of the device when using fuses.

Protection with semiconductor fuses is intended to protect the motor feeder and motor controller from damage due to short-circuit.

Figure 2: Protection using a thermal-magnetic motor protection relay.

The motor feeder is protected but damage to the motor controller is possible. When motor failure occurs, if part of the motor winding limits the fault current and the motor feeder is protected, this type of protection can be considered acceptable.

Figure 3: Secondary conductors.

3.1: Control using a 2-position switch
When K is closed, the control input is supplied to A1, A2 and soft starting of the motor is performed. When K is opened, soft stopping is performed.

3.2: Motor PTC input

When the motor PTC sensor is connected to P1, P2 the motor controller detects overheating of the motor windings.

3.3: Auxiliary Relays

The Alarm relay 11, 22 (NC) can be connected in series with the supply to the coil of a mains contactor. The End of Ramp relay 21, 22 (NO) can be used in series with the supply to the coil of an external bypass contactor.

Figure 4: Control using ON and OFF push buttons

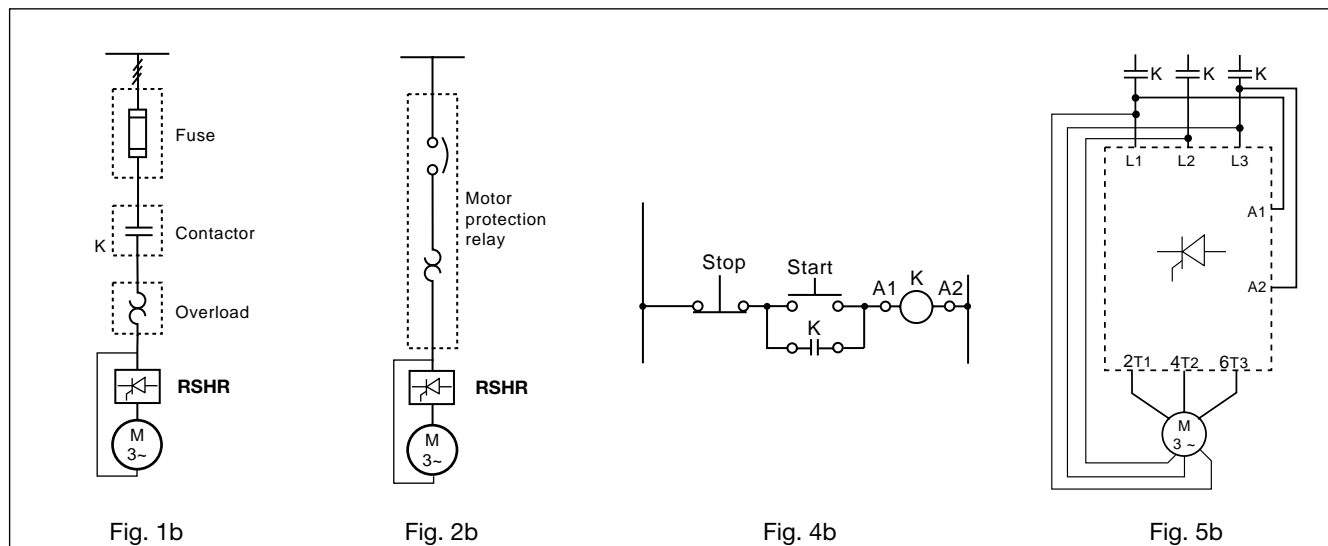

Pushing S1 soft starts the RSHR. Pushing S2 soft stops the RSHR. K is an auxiliary

contact of the mains contactor.

Figure 5: Control using 2 phases

Connecting input A1, A2 to two of the incoming lines will soft start the motor when K is operated. When K is switched off, the motor will stop (no soft stop).

Note: In the indicated wiring diagram the RSHR is configured In Delta. Models RSHR...V32/V34/V38 should be configured In Line as shown in the Connection diagram

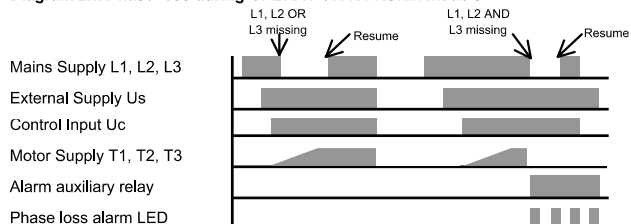

Diagram 3a: Normal Operation for RSHR..V38 models

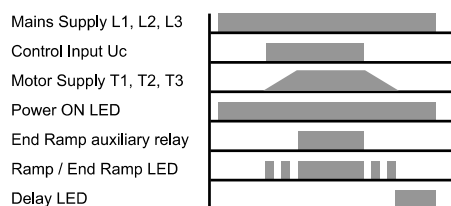

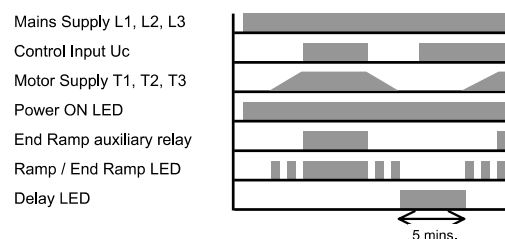

Diagram 3b: Delay ON

* External supply applies to RSHRM models only

Operations diagram for RSHR 3-Phase (cont.)

Notes:

Note 1: In the RSHRM models, the POWER ON Led does not give any indication to the presence of the mains voltage at L1, L2 and L3, since it goes ON only once the external supply is applied.

Note 2: The number of starts per hr. and overload cycle values should always be taken in consideration when the control input is cycled.

Note 3: Over-temperature is checked before Phase loss and Phase sequence alarms. The alarms will be activated as soon as the supply is applied.

Note 4: Apart from the RSHRM models, a Phase loss on L1 or L2 will cause the device to reset.

Note 5: When a motor PTC is connected, electromagnetic noise may be conducted into the unit. Thus if abnormal function is observed, the use of ferrite beads on the PTC wire (at the unit end) is recommended.

Note 6: Phase loss and Phase sequence are only checked on start up. In the case of the RSHRM, a phase loss of ALL 3 phases is detected during operation (ramping and running).

Note 7: Following Ramp Down, the Delay LED remains on for 5 mins. or until the mains supply is present, whichever is the shortest. The compressor will not start in case of an attempt to start during the Delay period. Once the 5 mins. have elapsed the compressor will start as long as the control signal remains present.

Overload Cycle & Starting Duty

Overload profile

In: AC-53a: x- Tx : F-S

where: In = nominal current through RSHR

x = overload current as a multiple of In

Tx = duration time for the controlled overload currents during starting

F = duty cycle (expressed as a percentage)

S = no of starts/hr.

The following tables indicate the allowable no. of starts as per Overload profile: In: AC-53a: 4-4: 50-S

Table 1: RSHRxx25CV3., where xx = 22 or 40

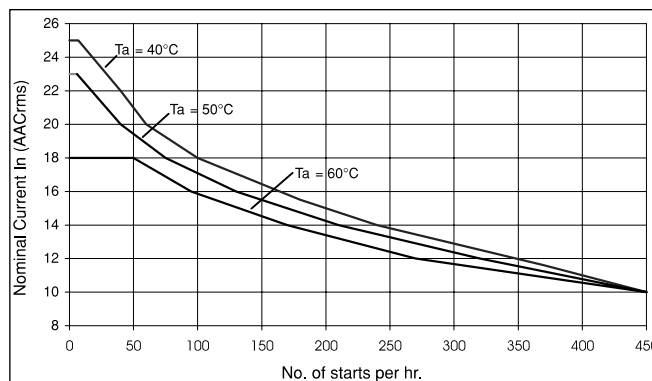

Table 2: RSHRxx25yV3., where xx = 48, 60 or M and y = C or D

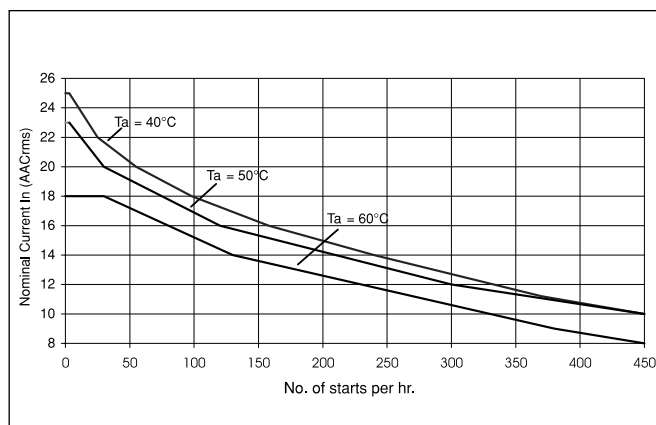

Table 3: RSHRxx32yV3., where xx = 22, 40, 48, 60 or M and y = C or D
